

Webinars: Fundamentals of equine practice

Injuries to the distal sesamoidean ligaments

Tuesday 6th May 2025

Unravel the distal extent of the suspensory apparatus – the distal sesamoidean ligaments

About this course

This webinar will discuss tips and tricks to accurately diagnosing injuries to the distal sesamoidean ligaments. We will then discuss the different treatment options and their associated prognosis. This webinar will hopefully provide you with more confidence to detect these unusual injuries given that they are a much less common cause of lameness in comparison to the other aspects of the suspensory apparatus in the horse.

Why do this course?

This webinar will be aimed at vets who have an interest in orthopaedics or are keen to develop an interest in this area. Delegates will develop more confidence in the diagnostic and therapeutic approach to managing these uncommon injuries.

Key areas

- Distal sesamoidean ligament injuries
- Clinical features
- Diagnostic imaging options
- Treatment options

The webinar will run **12.30pm to 1.30pm** London time on the above date.

Tutor

Alex Hawkins, BSc BVSc MVetMed DipECVS MRCVS
Lecturer in Equine Surgery
The Royal Veterinary College
