

Webinars: Fundamentals of equine practice

So, the liver enzymes are raised and the white cell count is low...? Practical interpretation of your biochemistry and haematology

Tuesday 24th June 2025

Wondering what those mildly increased liver enzymes mean? Why are the neutrophils high and the lymphocytes low? This course will provide answers to all your questions.

About this course

The webinar is for recent graduates starting out in equine medicine and mixed practitioners wanting to update their equine knowledge and treatment repertoire. A step-by-step approach will guide you through the interpretation of common laboratory abnormalities including biochemistry and haematology and help you choosing the most appropriate tests and further diagnostics for your clinical problem. Although often essential for the work up of any case, laboratory results can be confusing. The course will give you confidence in interpreting test results and differentiating clinically significant from non-significant findings.

The key areas include a wide range of laboratory abnormalities encountered in common equine diseases.

The webinar will run **12.30pm to 1.30pm** on the above date.

Tutor

Bettina Dunkel

DVM PhD DipACVIM DipACVECC DipECEIM FHEA MRCVS
Professor in Equine Internal Medicine and ECC
The Royal Veterinary College
