

## Webinar Series: Fundamentals of equine practice

### Diagnostic analgesia of the forelimb (excluding the foot) and its interpretation

Monday 20th April

*Are you confident blocking above the foot? Do you know how blocks can diffuse and which structures they desensitise?*

Although the majority of forelimb lameness localises to the foot in many cases it does not. This requires blocking more proximally with abaxial sesamoid, low 4 point, lateral palmar, median and ulna as well as all the synovial blocks. In addition, correct interpretation of these blocks is imperative in order to arrive at the correct diagnosis. There has been a significant amount of research defining which structures are desensitised by each block, often with surprising results. This well illustrated course will walk you through placement and interpretation of these blocks with hints and tips of how to pace them successfully.

#### Why do this course?

The course is aimed at equine practitioners who are keen to develop their skills in lameness diagnostics. Delegates will learn how to place the blocks safely and effectively as well as what to conclude from the results.

#### Key areas:

- Diagnostic analgesia of the forelimb (excluding the foot)
- Intra-articular anaesthesia of the forelimb
- Interpretation of forelimb nerve and joint blocks

## Tutor

**Andy Fiske-Jackson** BVSc MVetMed DipECVS FHEA MRCVS  
Professor of Equine Surgery  
Royal Veterinary College
