

Webinars: Fundamentals of equine practice

Pharmacological management of equine insulin dysregulation: Are SGLT2 inhibitors the magic answer?

Tuesday 23rd April 2024

When diet and exercise just isn't working...

About this course

This webinar will discuss the rationale behind the use of sodium glucose cotransporter-2 inhibitors (SGLT2)i for the management of equine insulin dysregulation that is refractory to management with dietary and exercise changes. We will discuss how these drugs work, the evidence for their use in horses and the potential side effects that need to be considered.

Why do this course?

This webinar will be aimed at vets who regularly see horses with insulin dysregulation in association with either equine metabolic syndrome (EMS) or pituitary pars intermedia dysfunction (PPID) and wonder when to suggest pharmacological treatment with a gliflozin. Delegates will learn how these drugs work, which cases they might be suitable for and the possible associated side effects that need to be monitored for.

Key areas

- Insulin dysregulation
- Equine metabolic syndrome
- Pituitary pars intermedia dysfunction
- Laminitis

The webinar will run **12.30pm to 1.30pm** London time on the above date.

Tutor

Nicola Menzies-Gow, MA VetMB PhD DipECEIM CertEM(Int.med) FHEA MRCVS
Professor in Equine Medicine, Member of the RVC Animal Welfare Ethical Review Board
and the RCVS Ethical Review Panel
The Royal Veterinary College
