

Webinars: Fundamentals of equine practice

Equine laminitis

Friday 28th June 2019

Do you worry whether you're up to date with the concept that equine laminitis is a syndrome with three forms rather than a disease?

Laminitis is a common and debilitating disease of the equine foot. There has been considerable advancement in our knowledge of the pathogenesis of this devastating condition over the last 5-10 years. It is now believed that it is a syndrome with three forms of the disease that do not necessarily have a final common pathway. This lectures will cover the pathogenesis of the three forms of the disease, as well as how to identify high risk individual animals, treat and prevent the condition.

It is designed to give the practitioners who deal with horses an increased understanding of laminitis as well as the confidence to treat and prevent it.

Why do this course?

The key areas that will be covered by the lecture are the pathogenesis of the three forms of laminitis as well as how to identify high risk individual animals, treat and prevent the condition.

The webinar will run on from **12.00pm to 2.00pm** London time including a 30 minute registration and familiarisation period prior to the commencement of the lecture.
