

Webinars: Fundamentals of equine practice

The approach to the swollen joint

Friday 14th June 2019

What do you think when you see a swollen joint? Have you thought of everything? What's the best course of action?

The practitioner is often presented with a swollen joint in a wide variety of circumstances. We will explore the reasons for joint distension, the appropriate diagnostic process and when to perform each step, how to interpret the findings and what treatment to employ. The information will be highly practical and relevant to the equine practitioner.

Correct management of the swollen joint will frequently determine the outcome and prognosis. Delegates will learn which cases require more urgent intervention and what that should be. They will be given many practical hints and tips to help them work up and treat these cases. The course is aimed at new and recent graduates with the aim of increasing their confidence in handling this common presenting complaint.

Why do this course?

The course will focus on common conditions, what we should do initially and during follow up assessments. Case examples will be presented to clarify the information.

The webinar will run on from **12.00pm to 2.00pm** London time including a 30 minute registration and familiarisation period prior to the commencement of the lecture.
