

Webinars: Equine acupuncture, rehabilitation and physiotherapy

Introduction to acupuncture & equine acupuncture - warts and all and Acupuncture's physiologic mechanism

Tuesday 2nd November 2021

Acupuncture and equine acupuncture both carry historical baggage that has put off many in the medical community since its modern introduction in the 1970s. In brief, western proponents of traditional Chinese medicine (TCM) theory have mistakenly construed acupuncture as an “energy medicine” that operates outside a scientific understanding of anatomy and physiology. Modern medical interest has developed from scientific research that shows it operates very much within our growing understanding of anatomic and physiologic responses.

In this webinar a brief description of acupuncture's difficult history will be followed by a description of some of the more important aspects of acupuncture related anatomy and the physiologic responses to acupuncture.

Why do this course?

This course is designed for veterinarians, nurses, & physiotherapists regularly involved with lameness/poor performance cases with a special interest in rehabilitation of the equine athlete. You will learn what acupuncture can offer to your clients, and how it is synergistic with physiotherapy to produce improved integrative therapy. It is also open to certified vet acupuncturists, certified physiotherapists, certified nurses and physiotherapy students.

Key areas

Background of equine acupuncture
Anatomic features of acupuncture points
Acupuncture's physiologic mechanisms.
