

Webinars: Equine acupuncture, rehabilitation and physiotherapy

Overview and veterinary treatment of impinging spinous processes and sacro-iliac disorders and How can physiotherapy benefit your patients?

Tuesday 23rd November 2021

Impinging spinous processes and sacroiliac disorder: What are the common clinical signs, diagnostics and treatment options available and how can they best be incorporated to your equine practice?

This webinar will review the common clinical presentations of horses suffering from impinging spinous processes and sacroiliac disorders and go over the common diagnostics challenges and tools used by veterinarian to diagnose such condition. We will then describe common treatments with an emphasis on how physiotherapy can be best integrated in the rehabilitation of these cases and how they can benefit your patients.

Why do this course?

This course is designated for veterinarians involved regularly with lameness/poor performance cases with a special interest in rehabilitation of the equine athlete and increasing the array of treatment they can offer to their client, especially regarding physiotherapy. It is also open to certified physiotherapists, certified nurses and physiotherapy students who want to learn more about the veterinary aspect of impinging spinous processes and sacroiliac disorders and how to integrate veterinary treatments to a rehabilitation protocol.

This course requires a basic knowledge of common orthopaedic conditions and modalities used in equine sports medicine and rehabilitation.
