

## Webinar series: Advanced nephrology and urology

### FGF-23: Case examples of how and when to use this new marker for feline CKD patients

**Monday 23rd September 2024**

#### Key Areas

- Interpretation of FGF23 measurements in CKD-mineral and bone disorder
- The use of renal diets in early CKD in cats
- Other factors that can affect FGF23 measurement

*Which cats with CKD would benefit from measurement of FGF23, how do I interpret the result and what should I do next?*

This webinar will use real life case examples of cats with CKD to illustrate when FGF23 measurement will be useful in the management of CKD-mineral and bone disorder.

Interpretation of the initial measurement of this novel biomarker will be explored, and how to use FGF23 repeatedly to monitor response to intervention. The use of renal diets in early CKD cases will be discussed. Other factors that can affect FGF23 measurement will be outlined.

#### Why do this course?

This course is aimed at veterinary surgeons who would like to expand their understanding of CKD-mineral and bone disorder in cats. Following this webinar vets will feel confident to know when and how to measure FGF23, how to interpret the result, what interventions are appropriate to use and when FGF23 measurements can be misleading.

The webinar will run **12.30pm to 1.30pm** on the above date.
